**No Data** = Title information not readily available. Extensive research required.

**Incomplete data** = Title information discrepancies between databases. Extensive research required.

The data in this report was acquired from two different databases (ALP & GIS). The ownership status of the mineral estates frequently change because of reversions and acquisitions. Therefore the data in this report may not be 100% accurate but the competency should be within 5%. The Forest Service performs extensive title research as needed on a case by case basis.
