

Notes:

1. First and last years (1984 and 2007) are based on part-year data (7 months and 9 months, respectively); annual counts are estimated for these years as [12 x monthly rate].
2. In 2001 and 2002 combined, approximately 37,000 samples were taken at Ground Zero; these counts are *not* included in those yearly totals.
