Here's my planned response:

1. With respect to the letter Tom forwarded. I have spoken to the relevant compliance and field staff, and they have told me that upon further exploration specific product enforcement was unlikely to be the best option based on the need for individual health assessments, amongst other factors.

I have the same recollection as Marc.

I did have some discussions with Jay last week or the week before where I remembered we thought at the time specific product enforcement wouldn't be the best option because of the need for a health assessment and other factors. I don't believe that view has changed at this point.

Howie – anything different that I don't know about?

*Regards,*
