### Document Body

Nicole and Rita,

I took the liberty to suggest two editorial changes (attached) for your consideration. First, somewhere I think it would be appropriate to identify the materials in focus are non-hazardous. It's a subtle issue, but it can be a barrier. Secondly, I suggest you might add under the back page paragraph "Green building and the Construction Initiative" something that indicates the EPA staff can also provide the names of knowledgeable contacts in the "public and private sectors." Through your established partnerships, you have access to many names that might be a starting point for the reader.

These two changes are simply suggestions and are intended to detract from this attractive flyer.

Thanks, Dave

Subject: Construction Initiative (CI) Fact Sheet and NACo Conference in July

Hi Elizabeth and Dave,

Attached is the draft Construction Initiative (CI) fact sheet for your information. I'd appreciate it if you would please pass it on to the rest

of the IRC, thanks!

#### CI Fact Sheet

This fact sheet is meant to provide a general overview of the CI, without going into much detail about it. The challenge we face is that it needs to be broad enough to be used to engage owners, developers, contractors, and architects, but still interesting and appealing from each of their standpoints. We intend for our application-based fact sheets and FAQ documents (which are currently in the very early stages of development) to complement this general fact sheet. Please keep in mind the fact sheet is still a work in progress, and we plan to coordinate with our communications department to improve the document. For example, under the "how does it work" section, we may want to go into a little more detail on how exactly EPA staff can work with owners, developers, or construction companies to get industrial materials used (i.e. conduct meetings, educational briefings, provide contacts, etc).

Additionally, in today's meeting we talked about whether the CI should become a more formal partnership program that other federal agencies or industry associations could cosponsor or endorse. I will discuss this further with EPA management.

#### NACO Conference

I was informed by our communications department that I should limit the publications I bring with me to the NACO Conference July 13-17 to those that are jointly endorsed by EPA and IRC's associations. I plan to bring with me the following:

- EPA's IMR Brochure
- Draft CI Fact Sheet
- C2P2 Fact Sheet
- Green Book (Coal Ash Benefits and Impacts)
- Fly Ash Facts for Civil Engineers
- Foundry Sand facts for civil engineers
- EPA's RCRA In Focus: C&D Recycling

Please let me know if you'd like me to add anything else that we have jointly worked on, either through a grant or otherwise.

(See attached file: Draft CI Fact Sheet\_June\_2007.doc)

Thanks,

Nicole

RE: IMR Markets in the DC area?

Nicole,

Fly ash is available from locations in Maryland, Pennsylvania and Virginia.  
I think there is a tendency for granulated blast furnace to be used in the DC area. The same is true for bottom ash and some gypsum materials. We have a number of marketers that are very active between the mason Dixon line and New England. Take names and we can connect them as needed.

Have a great weekend.

Subject: IMR Markets in the DC area?

Hi Elizabeth and Dave,

Hope you're doing well and looking forward to talking next week.

I'll be presenting at the Federal Environmental Symposium here in DC on Monday. The topic is how to implement E.O. 13423, which is the new EO affecting all federal agencies. I'll be presenting on how IMR can help agencies comply with the EO requirements, particularly the CPGs (recycled content construction products) and construction waste diversion requirements. I plan to mention the IRC in my presentation.

I am wondering what markets for industrial materials exist in the DC area? coal ash here, slag here, scrap tires? Also, if there is any way you can provide a "general" characterization of the materials and their market hubs (i.e., CCPs in the northeast, foundry sands in the Midwest) that would be appreciated. That way, if people ask me "Where could I get this stuff?" I could have a general answer.

Sorry for the short notice--if you could get back to me sometime between now and Sunday night, that would be SUPER! If not, I will just say that I can put them in touch with you folks who can help them out further (which I'll say anyway).

Thanks!!

-Nicole
